

VAF

Value Added Feature

SPIRALVEYOR® J-CONFIGURATION

The spiral conveyor up to infinite!

- Easy-stack concept
- Endless elevation
- Space saving
- No support structure needed
- Compact footprint
- Reduce installation cost
- Available for most AmbaFlex platforms

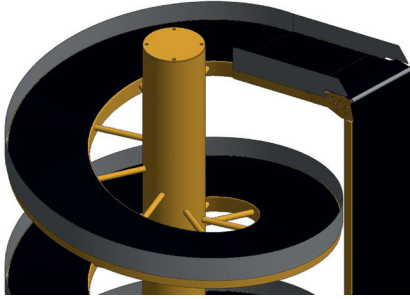

SPIRALVEYOR® J-CONFIGURATION

VAF

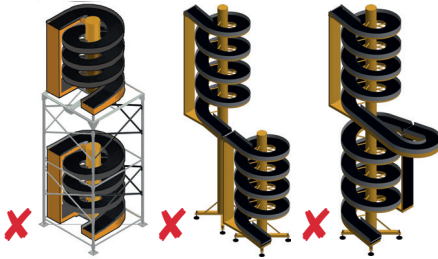

The NEW (patented) J-Configuration is designed to stack individual spiral conveyors easily. It is the first and ONLY solution in the market to stack spiral conveyors without the need for costly connecting loops and structures that enlarge the footprint.

Easy-stack concept:

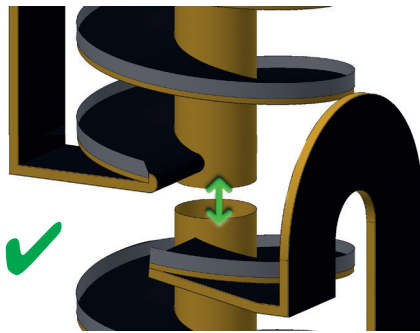

Spiral conveyors are known to elevate over multiple windings with one belt returning straight down to the lower end. This return requires a straight section on the upper end of the spiral to reach out of the spiral circle.

Because of the straight section spiral conveyors cannot be stacked in one line but need loops or an offset stack. Such solutions interrupt the continuous flow, add cost and consume space.

The J-Configuration is unique as it does NOT require such straight segment and by that, it is easily stackable. The upper end of the lower spiral can be connected to the lower end of the upper spiral in one ongoing helical flow.

Available for the following AmbaFlex platforms:

- SV - the general purpose spiral conveyor
- SVe - the extreme wide belt spiral
- SVo - the economic solution to handle cases with repeating sizes
- SVs - the narrow belt spiral conveyor

Value added feature for:

Single items:

In combination with our wide belt solutions, the SpiralVeyor® J-configuration can achieve great performances.

Shipping cases:

Specially developed for integration in distribution centers with multi-tier order picking modules.

Secondary packing:

To achieve endless elevation in existing buildings with narrow space.
