Value Added Feature

# **SPIRALVEYOR** **NESTED - CONFIGURATION**

Two-in-one

- Two product flows on the floor space of one
- Designed for low-height products
- For elevation or buffering

# SPIRALVEYOR® NESTED - CONFIGURATION

VAF

The Nested-configuration is a multi-track spiral that offers the most compact and flexible spiral conveying solution. The spiral is based on the idea that you can wind more than one track around the same vertical axle. These tracks can have the same belt width.

With the SpiralVeyor Nested-configuration, two or more tracks run above each other instead of side by side. This makes it especially well-suited for products with a low height.

Each track functions entirely separate, each with their own gear motor, maintenance access, and end rollers.

## In/outfeed configurations

The Nested-configuration comes in a various number of in/outfeed configurations. Custom configurations can be made on request.

## Spiral range

The Nested-configuration is available on most SpiralVeyor platforms and types.

## Product height

The clear product height is limited because of the nested configuration.

Depending on the central diameter of the SpiralVeyor, the maximum height of the product is up to 400 mm. Ask our sales engineering department for accurate dimensions.

The nested version of the SpiralVeyor is commonly used in packaging environment and e-commerce/warehousing industries.

Platform	Type/belt width
SpiralVeyor SVs	100, 140, 200 mm
SpiralVeyor SV	300, 400, 500, 600 mm
